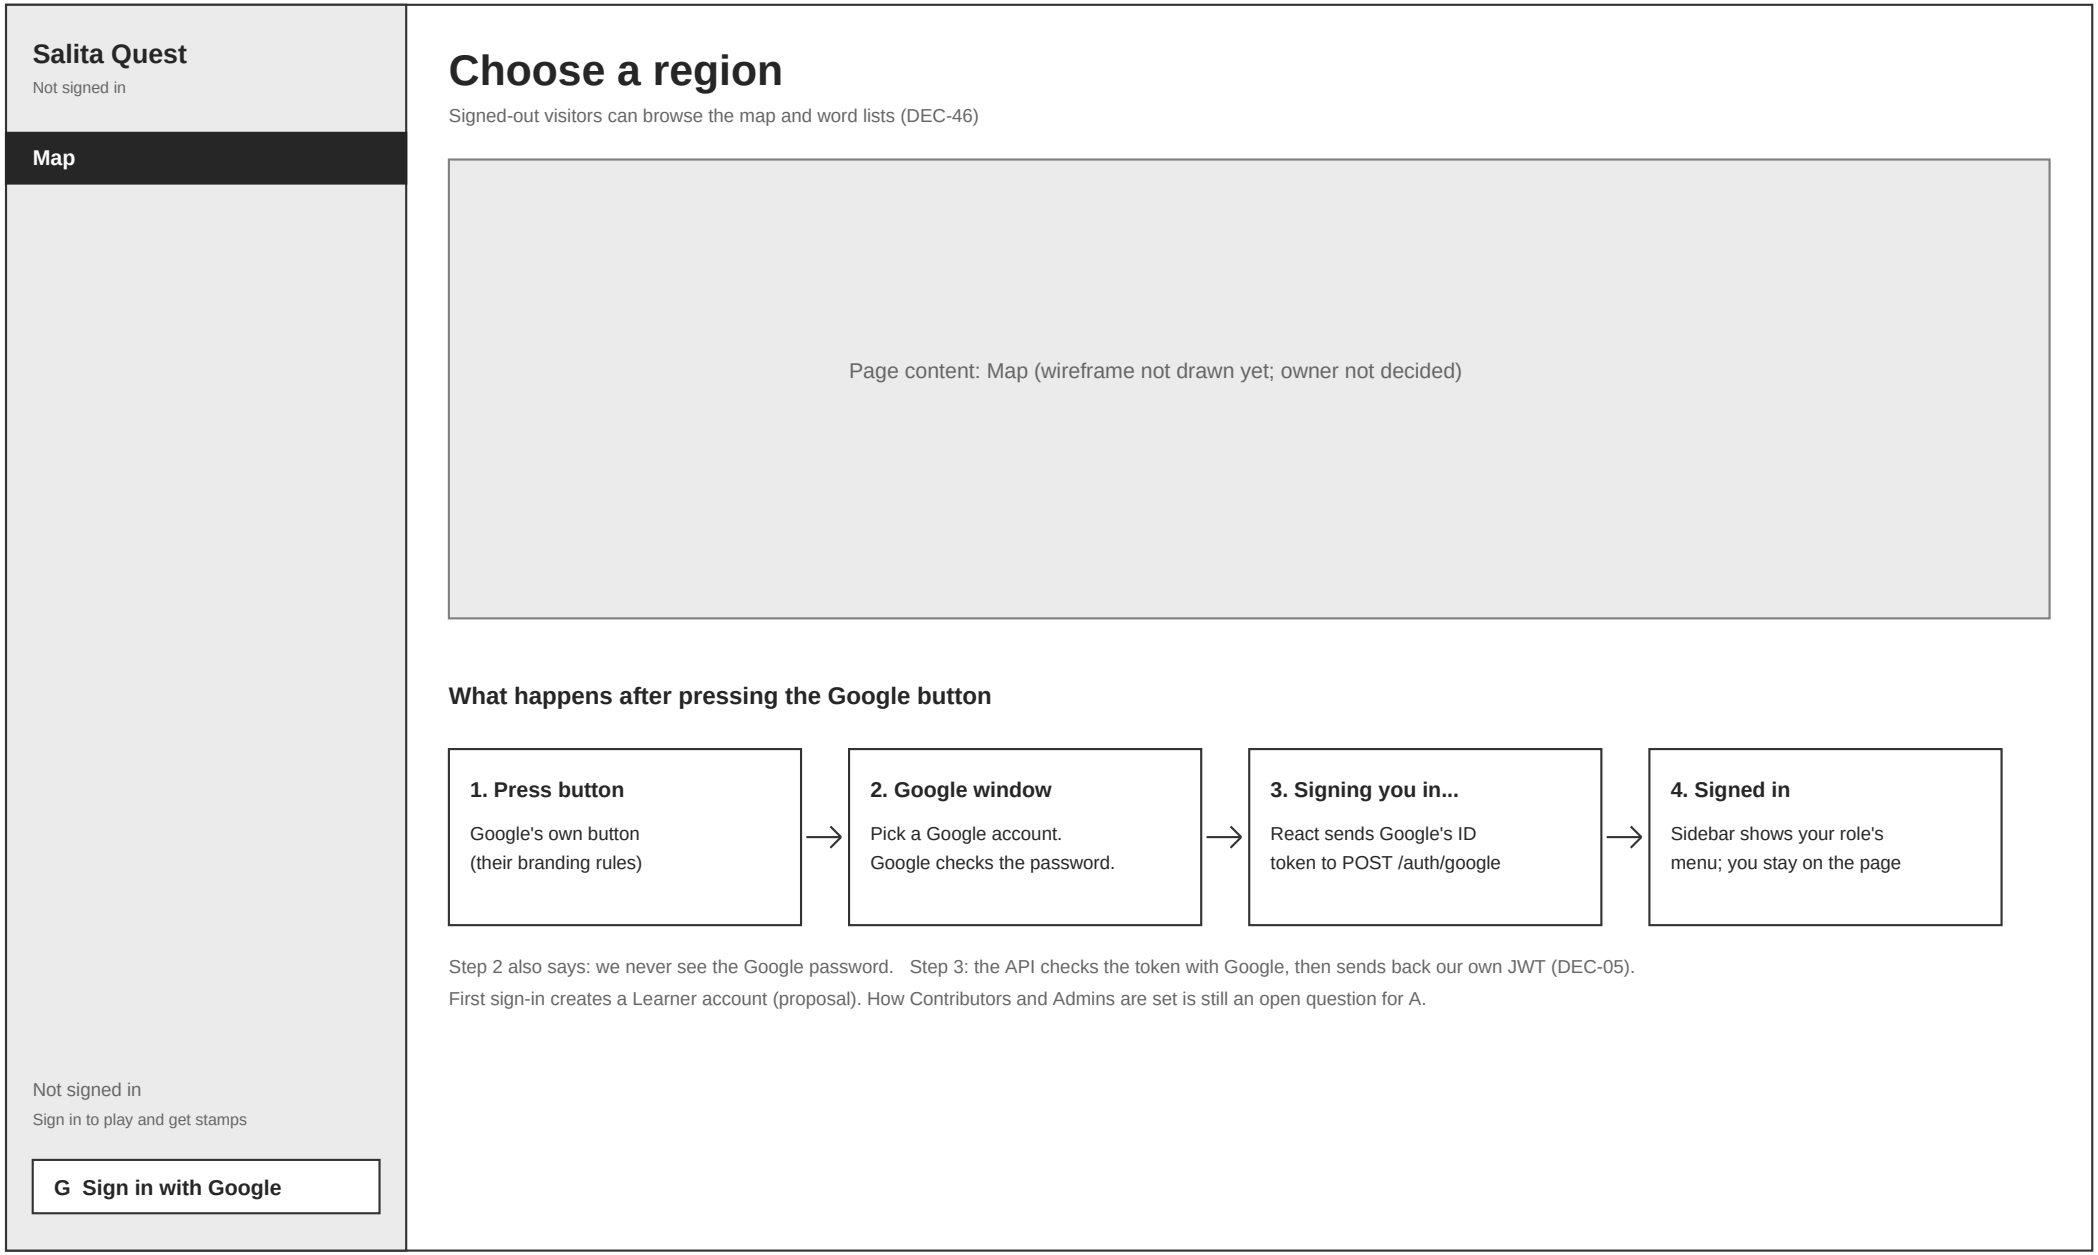
1. Sign in (app shell, signed out)

Member A - no route of its own: the Google button sits in the sidebar on every page (site map, DEC-51) - shown here on the Map at /



Step 2 also says: we never see the Google password. Step 3: the API checks the token with Google, then sends back our own JWT (DEC-05).
First sign-in creates a Learner account (proposal). How Contributors and Admins are set is still an open question for A.

Other states: Signing in: the button changes to 'Signing you in...' and cannot be pressed twice. Failed or cancelled: 'Sign-in failed. Try again.' under the button.
Server asleep (free Render instance): the 'Server waking up' screen, page 3. Signed out on a game or passport page: C's 'Sign in to play' panel.

2. Menu by role (sidebar on every page)

Member A - the same sidebar, four versions; links follow the site map (DEC-46, DEC-51) - menu labels match C's wireframes

Visitor (signed out)

Can open: Map, word lists (read only)

Links a role cannot use are hidden, not greyed out. Hiding is only for convenience: the API checks the role on every request.

Other states: Role comes from users.role and is read from the database on every request (DEC-23), so a demoted user loses access at once (API answers 403).
Sign out: deletes the token in this browser and shows the Visitor menu. Also cancelling it on the server is still open (CF-08). Typed a hidden URL: 'Not allowed', page 3.

3. System screens

Member A - shown inside the content area of any page; the sidebar stays - from the site map's grey boxes (DEC-51); all proposed except 'Not allowed'

Server waking up

When: the API is slow to answer (free server asleep)

Waking up the server...
The free server sleeps when nobody uses it.
This can take up to about a minute.

No button: retries by itself (proposal)

Not allowed

When: the API answers 403, or a hidden link is typed

You do not have access to this page.
Your account role cannot open it.

Go to map

Something went wrong

When: the API answers 500, or no network

Something went wrong.
Please try again. If it keeps happening,
tell the admin.

Try again

Page not found

When: the address matches no page

Page not found.
Check the address, or go back to the map.

Go to map

Other states: Expired sign-in (API answers 401): the sidebar returns to 'Not signed in' with the Google button; nothing on the page is lost (proposal).
'About a minute' and the waiting time before showing 'Server waking up' are guesses: check Render's free-plan docs and time it on the real service.
