Region with no words: 'No words yet' panel. Loading: banner 'Waking up the server, please wait'. API error: banner 'Could not load words. Try again.' with a Retry button. Audio fails to load: the button shows 'Audio unavailable'. On a phone (under 768px) the table scrolls sideways inside its own box.

Cannot delete Tagalog. This region still has 5 words. Delete its words first.

Edit region: Cebuano (Bisaya)

Code (cannot change): cebuano
Name: Cebuano (Bisaya)
Area: Central Visayas
Description: Spoken in Cebu, Bohol and nearby islands, and widely in parts of Mindanao.
Latitude: 10.3157
Longitude: 123.8854

Save changes **Cancel**

Other states: The panel opens when Add region or Edit is pressed (Add has an empty form and an editable Code). Validation: red text under the field, for example 'Name is required' or 'Latitude must be between -90 and 90'. Duplicate code: 'A region with this code already exists'. Delete asks 'Delete Hiligaynon? This cannot be undone.' with Delete / Cancel, and is blocked while the region has words (banner above). Not an admin: 'You do not have access to this page' (the API also refuses with 403). Saving a region also changes its pin on the map.

Other states: The panel opens when Add word or Edit is pressed. Validation: red text under the field ('Word is required', 'Choose a region'). Duplicate: 'This word already exists in Tagalog' (the API answers 409; whether Mahal and mahal count as the same word is still open). Delete asks 'Delete Maganda? This cannot be undone.' and, if the word has audio, adds 'Its audio recording will no longer be used.' Audio is uploaded on the Audio files page, not here. Not an admin: 'You do not have access to this page' (403). Region filter with no matches: 'No words in this region yet'.
